

Kevin Kohutek

Full Stack Developer

EXPERIENCE

Home Depot, Entry Software Engineer - Java (Remote)

November 2022 - September 2024

- * Was part of a team that developed software to replace the legacy code used by tool rental services, reducing unaccounted-tools and missing attachment by over 20% after release.
- * Patched a major bug involving the authorization of some JWT keys that were unable to be authorized.
- * Designed and developed RESTful APIs that handle over 10,000 requests per day.

Home Depot, Atlanta - HD Software Engineer Internship

September 2022 - November 2022

I spent most of my time learning as much as possible about how the codebase works and how it operates on a large scale. It was a great experience to have.

EDUCATION

Tech Fios, Remote - Bachelor's degree equivalent

May 2022 - August 2022

It taught me a solid foundation in how networking, microservices, and SQL Server work. It took me from not knowing what a framework was to creating fully secure back-end API endpoints. Additionally, it taught me the tips and skills needed to make myself an excellent candidate for companies and recruiters.

PROJECTS

PortFolio - Kevin's Homepage

The home page displays all the information you need about me and my past. Please check it out at: <https://KevinKohutek.com>

SKILLS

JAVA, Spring Boot, JWT, MySQL, JavaScript, React
